

AI DATA PIPELINES

THE QUALITY OF YOUR AI DEPENDS ON ONE THING MORE THAN
ANYTHING ELSE... THE DATA YOU FEED IT.

HOW AI SYSTEMS CONSUME DATA

- AI learns from processed data.
- Raw files are converted into structured information.
- Documents become AI-readable.
- Clean data improves AI responses.
- Data quality directly affects accuracy.

ETL FUNDAMENTALS

- Extract data from different sources.
- Transform data into a clean format.
- Load processed data into storage.
- Standard workflow in data engineering.
- Used in almost every production AI system.

DATA INGESTION FLOW

- Collect data from multiple sources.
- Clean unnecessary information.
- Extract useful content.
- Prepare data for AI processing.
- Store data for future retrieval.
