

STREAMING ARCHITECTURE

FAST AI ISN'T JUST ABOUT POWERFUL MODELS... IT'S ABOUT
STREAMING RESPONSES IN REAL TIME.

WHAT IS STREAMING ARCHITECTURE?

- Sends data continuously instead of all at once
- Makes AI apps feel faster
- Improves user experience
- Used by ChatGPT, Gemini and Claude
- Foundation of modern AI applications

SERVER-SENT EVENTS (SSE)

- One-way communication
- Server continuously pushes updates
- Lightweight and easy to implement
- Perfect for AI streaming
- Uses a single HTTP connection

WEBSOCKETS

- Two-way communication
- Client and server communicate instantly
- Supports real-time interactions
- Great for chat and multiplayer apps
- More flexible than SSE

TOKEN STREAMING

- AI sends responses token by token
- Users see words appearing instantly
- Reduces perceived waiting time
- Creates a ChatGPT-like experience
- Improves responsiveness

REAL-TIME UX

- Immediate feedback
- Better user engagement
- Typing animation
- Streaming responses
- Smooth and modern experience
