

AI PRODUCT UX THINKING

PEOPLE DON'T STOP USING AI BECAUSE IT'S INACCURATE. THEY STOP USING IT BECAUSE THE EXPERIENCE FEELS SLOW AND FRUSTRATING.

WHY AI PRODUCT UX MATTERS?

- AI quality alone is not enough.
- User experience decides retention.
- Small UX improvements build trust.
- Fast-feeling apps outperform fast models.
- AI Engineers build experiences, not just prompts.

LATENCY MASKING

- AI responses take time.
- Never leave users waiting on a blank screen.
- Show progress while AI is working.
- Keep users engaged.
- Makes the app feel faster.
- Example:
 - ChatGPT "Thinking..."
 - Gemini loading animation
 - GitHub Copilot generating code

SKELETON LOADERS

- Show placeholder content before data loads.
- Reduces perceived waiting time.
- Makes the interface feel responsive.
- Used in modern web and mobile apps.
- Better than empty loading screens.
- Facebook, LinkedIn, YouTube

STREAMING UX

- Show the response word by word.
- Users see progress immediately.
- Makes AI feel alive.
- Improves perceived speed.
- Standard in modern AI chat apps.
- ChatGPT, Claude, Gemini

AI PRODUCT RETENTION LOOPS

- Make users return regularly.
- Save chat history.
- Suggest follow-up actions.
- Remember previous conversations.
- Personalize the experience.
- ChatGPT Memory, Notion AI, Grammarly
